**Responses to the Three Questions on the Theme "Infrastructure and Systems in Crisis" in Lusaka:**

1. **What is the role and place of the church in Lusaka in responding to the crisis of Infrastructure and Systems?**
    - The church in Lusaka has a vital role in advocating for and supporting the development and maintenance of essential infrastructure and systems within the community. It serves as a moral and ethical voice, encouraging the government and other stakeholders to prioritise the development of infrastructure that meets the needs of the people. The church can also be a platform for raising awareness about the importance of robust infrastructure and systems for societal well-being.
    - Additionally, the church provides practical support by helping to identify areas where infrastructure and systems are failing and mobilising resources to address these gaps. This can include initiatives like building or maintaining community facilities, supporting local schools, or creating systems for better resource management within the community.

2. **What are three practical steps that the church in Zambia can take to respond to the Infrastructure and Systems in Crisis?**
    - The church can collaborate with government agencies, NGOs, and other stakeholders to advocate for the improvement of local infrastructure and systems. This could involve organising community meetings, writing petitions, and engaging in dialogue with policymakers to ensure that infrastructure development is aligned with the needs of the community.
    - Churches can initiate and support community-based projects aimed at improving local infrastructure, such as constructing or renovating schools, healthcare facilities, or water and sanitation systems. These projects can be funded through church collections, grants, or partnerships with local and international organisations.
    - The church can also provide training and education to community members on the importance of maintaining infrastructure and systems. This could include workshops on proper sanitation practices, the importance of clean water, or how to advocate for better infrastructure in their communities.

3. **What are three practical steps that your church community can take to respond to the Infrastructure and Systems in Crisis?**
    - The local church community can start by conducting a needs assessment to identify the most pressing infrastructure and system-related issues within their area. This could involve surveying community members or conducting inspections of local facilities to determine where the greatest needs are.
    - Once the needs are identified, the church community can mobilise resources to address specific infrastructure issues. This could involve organising fundraising events, recruiting volunteers to help with construction or maintenance projects, or partnering with local businesses to secure materials and expertise.
    - The church community can also work to educate its members on the importance of supporting and maintaining local infrastructure. This could include teaching about the role of infrastructure in community health and well-being, encouraging members to take responsibility for maintaining communal spaces, and advocating for better infrastructure at the local government level.
